TOPIC: PROCOM PARTICIPATION REPORT

Assalam,

INTRODUCTION:

I am Bazil - Uddin-khan and I participated in Procom competition that was held in fast Karachi from 18th February to 19th February. I would like to tell my experience in participating 1st time in Procom plus , challenges etc. I noticed and how to improve it in upcoming years.

EXPERIENCE:

First of all as I told I participated in Procom in an computer science game know as Algo showdown this was my first ever experience of playing games related to CS in a competition in terms of my experience it was lovely to become a part of Procom because it provided me the opportunities to evolve my knowledge related to CS not only this i was able to learn some concepts like algo is part of our (semester) so it helped me to get the knowledge about the subject this helped me to increase my knowledge bot only this it provided me the opportunities where i can compete as a team or alone with other teams this encourages a person to be more energetic in participating like i would also want to highlight that i was participating in Algo one day before my competition I participated in Algo-showdown sample competition which i won and I got 1st position in it this was really a boost for me as i was able to prepare for my competition by seeing patterns of Qs not only this I was delighted that i got my registration fees back. So I will encourage the upcoming Procom team to initiate these types of sample company as this will help to encourage students in participating in competition.

CHALLENGES:

But i will also discuss the challenges i noticed discussing it firstly the common challenge I noticed was that there were connectivity issues before the game and sometime during it, not only this the issues raised by different teams were that the answer scheme keys were not correct according to question. The other thing i noticed that there were participants from different universities etc. So there should be a proper guide for them like where are there respective classes, and like where are trash bins placed so that no unnecessary trashing is been done.

RECOMMENDATIONS:

In terms of recommendation i will suggest to resolve connectivity issues as computer science game cannot be without proper internet , plus i would suggest to address the questions related to question legitimacy and question marking scheme that are been raised by students there so that there would be no problem in future also another solution i will say is to properly guide the students like where are the defined allocated rooms etc. Also I have suggested earlier that fast students should be give more weightage in Computer subjects . Also more sample competitions should be made so that more students could get encouragement and this will lead to more enthusiasm in participating in future Procom events. Also I need to suggest better navigation and guidance.

I would be hopeful that my recommendation and the challenges i noticed will be addressed to make this event more prosperous in upcoming years. This will help to encourage more students and build Procom as a brand in the future too.

Thanks.

PARTICIPATION PROOF:

CERTIFICATE OF PARTICIPATION

PRESENTED TO MR/MS

BAZIL UDDIN KHAN

TO CERTIFY THEIR PARTICIPATION IN
ALGO SHOWDOWN
